

Intelli-Safe™

The next level in cash security

Around the world, cash in circulation is rapidly increasing, prompting the need for secure and efficient cash-handling systems. As greater security threats loom, many cash-in-transit (CIT) companies, banks and retailers are looking for better ways to deter armed robbery and detect counterfeit notes. Others are looking to optimise their cash inventory control as a way to save both time and money.

The Gunnebo Intelli-Safe™ offers an automated cash-handling system with an unrivaled level of accuracy that sets it apart. Whether you require a single note validator or a device capable of counting, depositing and managing multiple denominations of notes, the Intelli-Safe™ solution, configured specifically to your cash-handling needs, can deliver the advanced security and cost and time savings you're looking for.

GUNNEBO®
For a safer world

The next level in cash security

The best in automated cash handling

The Intelli-Safe™ cash-handling solutions give you full control over your cash inventory at all times. Save hours in manual cash reconciliation and paperwork, and simplify shift handovers and final till balancing. You'll also save thousands each month by making cash management processes vastly more efficient.

The Gunnebo Intelli-Safe™: three core services for intelligent security

An automated deposit safe, designed for counting, securing and managing cash, Intelli-Safe™ replaces the traditional manual deposit safes and integrates easily and seamlessly at small and medium-sized retail outlets. No need of new cash handling procedures or training. Intelli-Safe™ offers the specific benefits:

- The highest level of security (accessibility in presence of two separate keyholders only). Intelli-Safe™ secures deposited notes into sealed cassettes and minimizes cash-collection and transport costs. It also detects counterfeit notes
- Time and cost savings, on average 2 hours per day with an unrivalled accuracy on counted cash and secure storage. No more need to waste time counting, your employees are free to focus on their core activity.
- Online monitoring through the web-based monitoring software CashControl. Intelli-Safe™ eliminates manual paperwork, significantly reducing cash account errors, discrepancies and reconciliation time.

BENEFITS AT A GLANCE

- Greater security and reduced likelihood of armed robbery and theft
- Cost savings as a result of cash deposit and efficient cash management processes
- Less shrinkage and discrepancies in till counts, as cash is only handled once
- Less time in managing and reconciling cash
- Improved staff productivity and increased confidence in cash handling
- Higher customer service and satisfaction levels
- Lower reconciliation and insurance costs
- Real-time monitoring of cash levels
- Complete transaction transparency
