

SafeCash Retail Station

Full service cash recycling for retailers

The SafeCash Retail Station is a full cash recycling solution where cashiers can quickly and securely fill, refill and empty their tills.

At the beginning of the day, a cashier receives either a pre-defined mix or can choose from a selection of mixes depending on authorization. Coins are delivered by denomination in separate bowls to make filling and refilling easier. During the day a refill of certain denominations is possible up to a pre-defined limit. A head cashier is able to perform all these actions on behalf of cashiers.

At the end of the day, the cashier returns to re-deposit the cash. The station simultaneously counts and authenticates the notes and coins before delivering a receipt. 800–900 coins can be counted and sorted per minute and up to 8 notes counted per second. Neither notes nor coins need to be fed into the machine one by one – bundles of up to 200 notes and the complete till with coins can be deposited in one go.

Configuration

The SafeCash Retail Station is based on cash handling components used in a bank environment. Both the note- & coin recycler are well proven technologies giving it the best up time possible. The retail station is particularly suited as back-office machine for the bigger retailers starting with 5 cash tills or more. It reduces the risk for robbery and increases security by safely storing cash through the night. Notes are kept in a certified safe with extra ink protection available as an option.

Cash management and monitoring

The real-time cash level of each safe can be continuously tracked using Gunnebo's web-based monitoring software. This can either be hosted by Gunnebo or by the retailer, who may choose to run the programme locally or centrally.

Access to the system may be granted to CIT partners to help optimise route planning and pick-up times. Gunnebo service may also be connected to monitor the technical status of a series of machines so that maintenance and updates can be carried out before a problem occurs.

Same-day credit

As soon as notes are deposited, details of the amounts can be sent to the bank allowing the retailer's account to be credited that working day. (Note: This can only be done with the cooperation of a bank).

Quality and environmental management systems

The SafeCash Retail Deposit is manufactured in accordance with ISO 9001 for Quality Management Systems and ISO 14001 for Environmental Management Systems.

COUNTING AND SORTING

Coins

Sorting Speed	800–900 coins per min
Sorting capacity	up to 8 denominations
