Automated technology for 24/7 accessibility

Reduce staff time as the next-generation automated technology retrieves the locker compartment without assistance from staff at any time and on any day of the week. Drive utilisation rates, attract a broader customer base and increase locker rental fees thanks to 24/7 accessibility. Offer customers and employees user-friendly features like the interactive user interface and card reader, both of which are as easy to use as an automated teller machine (ATM). And enhance access for people with a disability with the new ergonomic touchscreen.

Compact by design

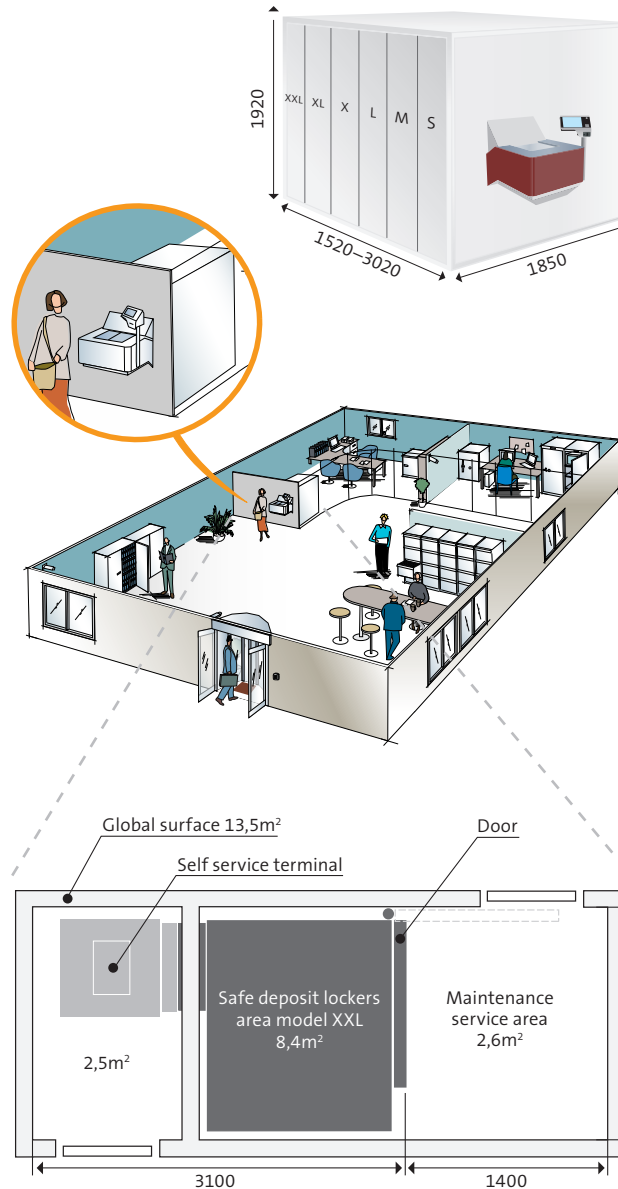

Discover the plug-and-play design, which is delivered as a complete unit and offers all the benefits of a smaller model -quick installation, easy integration- but larger to feature even more options. Benefit from a large installation that is compact, does not require a pre-built vault and can be easily relocated without physical alterations. Install into lobby wall or as free-standing unit, depending on your existing environment.

Customisation at your service

Choose from six different sizes (Midi S, Midi M, Midi L, Midi X, Midi XL and Midi XXL), five different locker heights and from 74 to 310 locker compartments. The service area ranges from 6 m² for the Midi S to 11 m² for the Midi XXL. Customise the terminal's colours and materials to better integrate into your self-service area. Avoid overloading locker compartments and forestall technical issues via the onboard weighing function. For a smaller unit, Gunnebo's SafeStore Auto Mini is available, while SafeStore Auto Maxi is available for larger installations.

Service maintenance access from the rear

Choose from a combination of locker sizes and configurations

There are 6 alternative shelf formations:
