

Gunnebo EntraLinq App

Remote connectivity for Gunnebo gates

Smart gates and the IoT

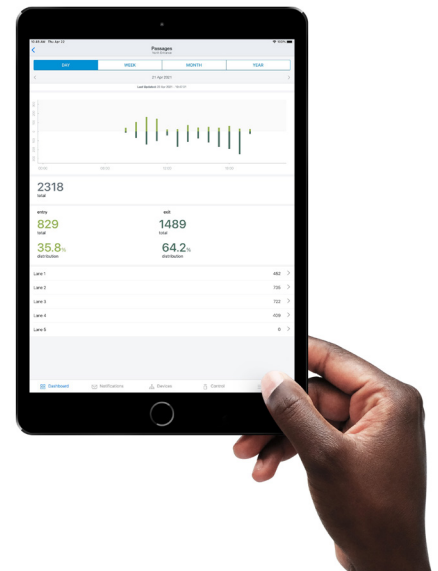

Using cloud-based technology to control entrances

The internet of things (IoT) is becoming more commonplace in a modern, digital world. Simply put, IoT allows devices to communicate on enclosed, private and secure networks via the cloud to facilitate each other and work in tandem.

By combining connected devices with automated systems, it is possible to gather information, analyse it, and create an action. The internet of things brings these networks together.

Why use IoT?

Connected devices that share data allows smart activity and this has a large sustainability benefit. Sensors, data collection and automated action translates to a save on costs, time and energy. It makes our processes more efficient, streamlined and above all, intelligent. Technology is advancing faster than ever and the IoT allows access control to work smarter, designed with the future in mind.

Connect to protect

Smartphone and device control from remote

Gunnebo EntraLinq app provides full control of your Gunnebo product from anywhere, no matter if on site or on the move. The intuitive app runs on smartphones and tablets and connects to any Gunnebo product connected to its cloud.

Control your accesses

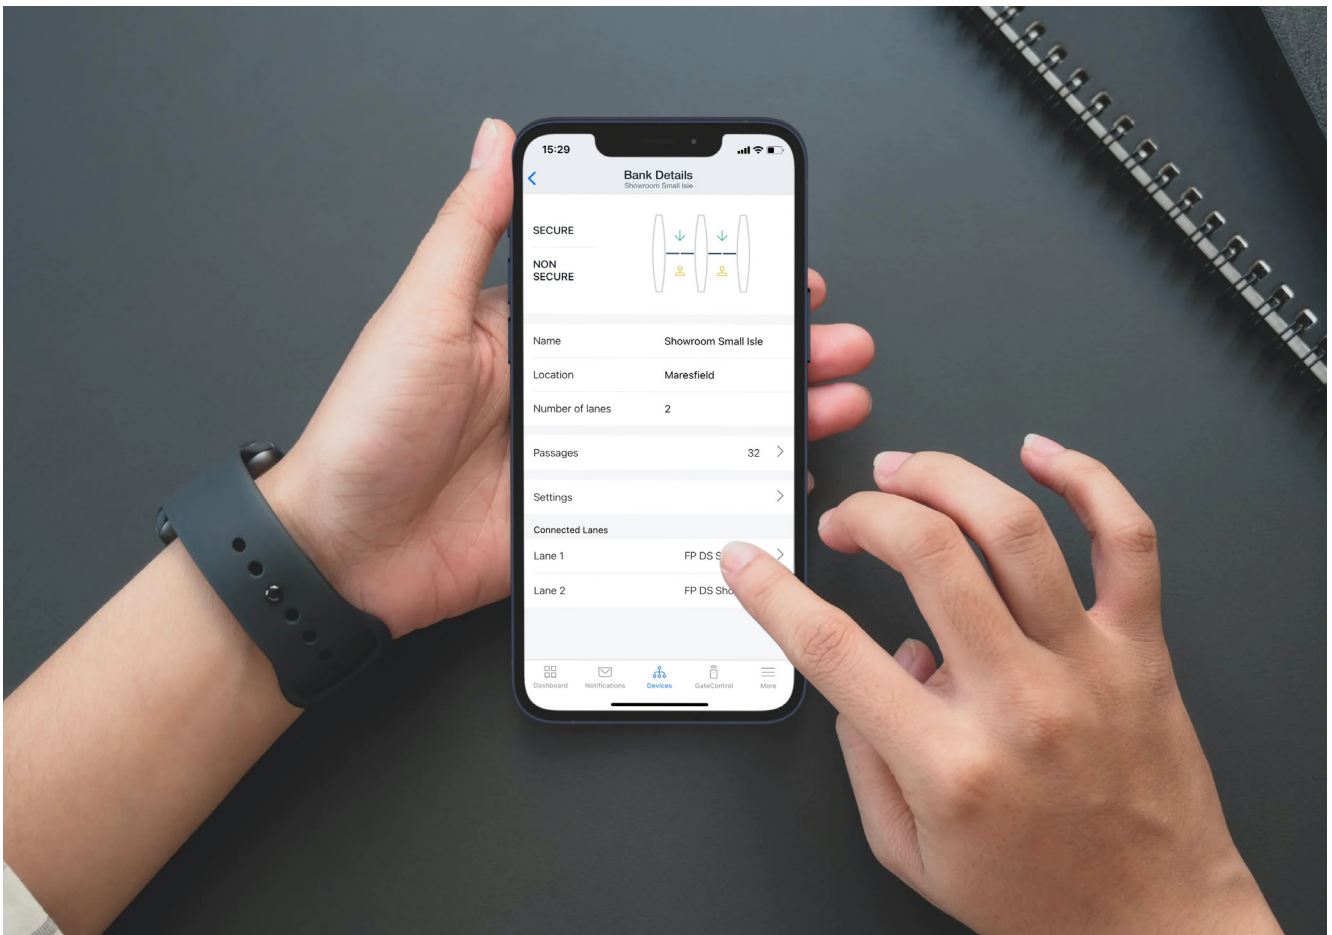

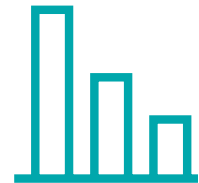

Gain control over access points, allow single passages and the ability to change modes at the touch of a button.

Health check your security

The health function ensures your connected gates are operating as they should. Check on the status of connected gates to notify of fraud attempts, alarms and technical incidents.

Analyse Process data

Monitor the processes that occur throughout the day and over a period of time. The process function presents statistical data and graphs to accurately determine flows, activity levels, usage and fraud counts.

EntraLinq Bundle Overview

EntraLinq Control

Premium features providing advanced remote control, allowing more efficient and granular control of one or several connected gates.

The control bundle is perfect for receptionists and staff based in the entrance of a building, as it allows an increased level of control of operations.

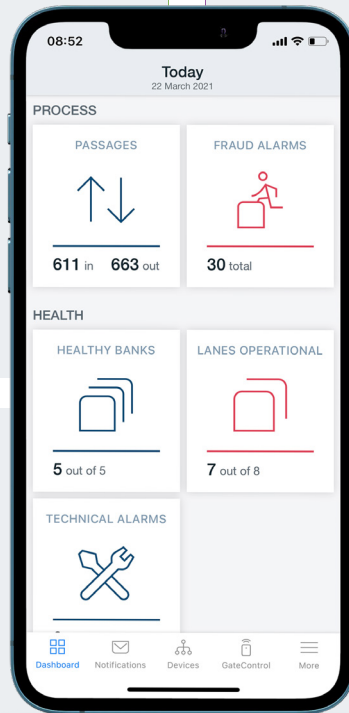

Also includes real-time process statistics and live health status for all connected gates.

EntraLinq Health

Premium features providing in-depth information needed for advanced monitoring of the health of gates from remote.

The health bundle is ideal for technician use to observe the health, functioning and overall operability of the connected gates onsite.

The bundle also includes real-time process statistics and basic remote control of all connected gates.

Premium features providing real-time and historical process statistics, allowing deeper analysis of people flow and fraudulent behaviour.

The process bundle is ideal for building managers to gain detailed insight into user traffic.

Easy to read graphs are generated, and statistics calculated based on people flow and activity using connected gates,

Also includes real-time process statistics and live health status for all connected gates.

EntraLinq Process

EntraLinq Plus includes all premium features found in the entire EntraLinq suite. In-depth information, historical statistics and advanced monitoring of unlimited number of connected gates.

The plus bundle is the top tier of EntraLinq levels, providing all functioning and control usage offered within the entire suite.

EntraLinq Plus is for those who opt for the full package. It includes no restrictions on user roles, user capacity or lane provisions. Perfect for those who want complete access in one subscription.

EntraLinq Plus

EntraLinq Starter Bundle

Bundle of essential features for smaller installations providing basic remote control, real-time process statistics and live health status for all connected gates. Create up to five users and manage their access levels with three different user roles.

- Basic remote control of all connected gates
- Real-time passage and fraud alarm statistics
- Live health status of all connected lanes
- User roles: Owner, Admin, Staff
- Number of users: Up to 5 users
- Number of connected gates: Up to 9 gates

EntraLinq Bundles

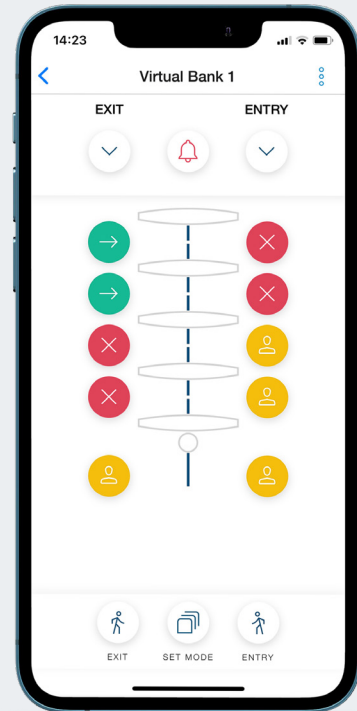

EntraLinq Control

The control bundle focusses on the operation of connected gates, featuring mode changes, passage authorisation and a virtual panic button.

Create an unlimited number of users and manage their access levels with up to five different user roles.

- Advanced remote control of all connected gates
- Authorise single passages
- Change lane mode and create pre-set directional modes simultaneously for all gates in a bank
- Virtual panic button for immediate activation of pre-assigned panic mode
- Real-time passage, fraud alarm statistics and live health status of all connected lanes
- User roles: Owner, Admin, Manager, Staff, Staff Lite
- Number of users: Unlimited
- Number of connected gates: Unlimited

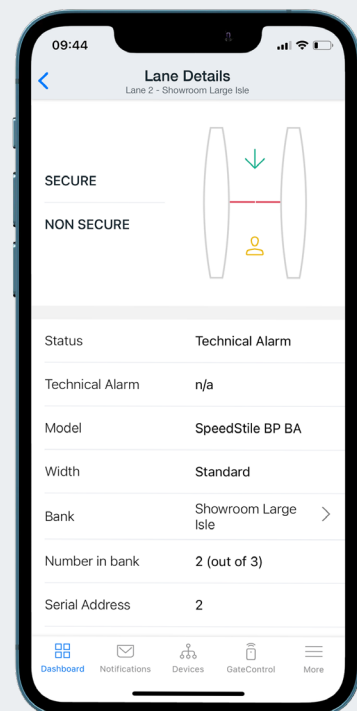

EntraLinq Health

The health bundle provides a detailed and historical overview of the health and functioning of connected gates; providing visual indicators of malfunctions, operability, technical alarms and critical events.

Create an unlimited number of users and manage their access levels with up to five different user roles.

- In-depth health status of all connected lanes
- Historical data up to 10 years, detailed logs and in-app notifications.
- Real-time passage, fraud alarm statistics and basic remote control of all connected lanes
- User roles: Owner, Admin, Manager, Staff, Staff Lite
- Number of users: Unlimited
- Number of connected gates: Unlimited

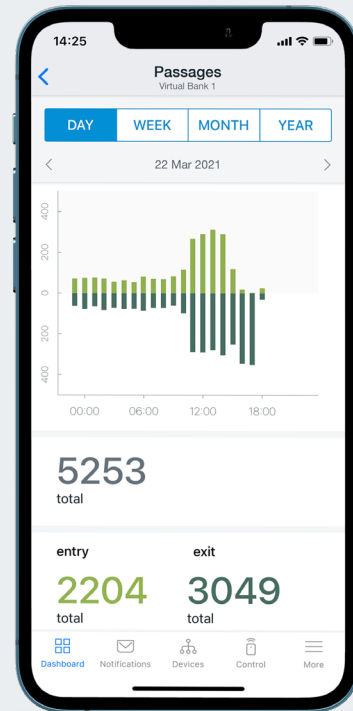

EntraLinq Bundles

EntraLinq Process

The process bundle is concerned with the data generated from user passage. Clear graphs with historical usage statistics are generated automatically, giving a detailed insight into user traffic.

Create an unlimited number of users and manage their access levels with up to five different user roles.

- Real-time and historical passage and fraud alarm statistics
- Up to 10 years of data with hourly granularity
- Basic remote control and live health status of all connected lanes
- User roles: Owner, Admin, Manager, Staff, Staff Lite
- Number of users: Unlimited
- Number of connected gates: Unlimited

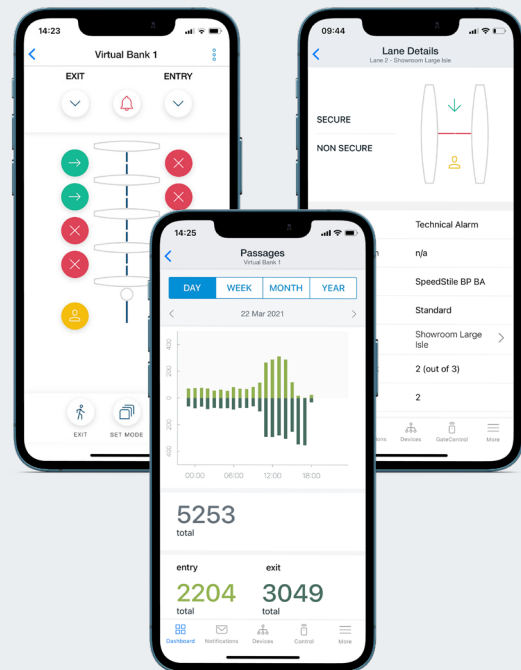

EntraLinq Plus

The plus bundle provides a complete solution of all premium features found in the entire EntraLinq suite; to include advanced control, health and process functions.

Create an unlimited number of users and manage their access levels with up to five different user roles.

- Advanced remote control of all connected gates
- Historical data, detailed logs and in-app notifications.
- Up to 10 years of data with hourly granularity
- Real-time and historical passage and fraud alarm statistics
- In-depth health status of all connected lanes
- User roles: Owner, Admin, Manager, Staff, Staff Lite
- Number of users: Unlimited
- Number of connected gates: Unlimited

Tailored to Suit Your Needs

EntraLinq can be adapted to individual user requirements thanks to its modularity. Modules can be added individually or in bundles to really personalize your app and get the most out of this innovative and exclusive software.

Module subscriptions can be dynamically activated and deactivated to adapt to your needs. We know the workplace is not linear but dynamic, with our customers' needs changing often, therefore you need a product that easily accommodates change. EntraLinq allows you to react on the fly to a change of requirements as they occur.

The EntraLinq Modules

An in-depth look at the individual modules available

ControlMod Manual

Provides essential features needed for controlling one or several banks of gates from remote.

- Manually grant single passages in entry or exit direction through any gate of your choice or through a single pre-defined gate.
- Change the lane mode (free/controlled/locked) independently in each direction for one gate or multiple gates simultaneously.
- See a high-level health status indication for all connected gates.

ControlMod Automation

Provides advanced features allowing more efficient control of one or several banks of gates from remote.

- Create pre-set directional modes for all gates in a bank (i.e. bank modes) and activate these effortlessly with a single button.
- A virtual panic button close at hand allows immediate activation of a pre-defined panic mode and alarm for a bank of gates.

HealthMod Live

Provides essential information needed for basic monitoring of the health of all connected gates.

- Receive live status information (Ok/Technical Alarm/Offline) for each connected gate.
- Monitor and view technical alarms from all connected gates in real-time.
- Access the daily accumulated count of technical alarms for each bank of gates (auto-resets at midnight).

HealthMod Plus

Provides in-depth information needed for advanced monitoring of the health of all connected gates.

- Access historical data of technical alarms (up to 10 years of data) for banks and individual gates with hourly granularity.
- Access detailed event logs (mode changes, technical alarms, fraud alarms, gate online/offline) for each gate.
- Receive in-app notifications if critical events (technical alarm, gate online/offline) occur.
- Identify malfunctioning gates and banks with critically low operability.

ProcessMod Live

Provides essential live process information from all connected gates.

- View live (near real-time) counting of passages from all connected gates.
- Check daily accumulated passage count (auto-resets at midnight) for each bank of gates.
- View live (near real-time) counting of fraud alarms from all connected gates.
- Check daily accumulated fraud alarm count (auto-resets at midnight) for each bank of gates.

ProcessMod Plus

Provides essential live and historical process information from all connected gates.

- Access historical passage counts (up to 10 years of data) for banks of gates and individual gates with hourly granularity.
- Access historical fraud alarm counts (up to 10 years of data) for banks of gates and individual gates with hourly granularity.

AdminMod Full

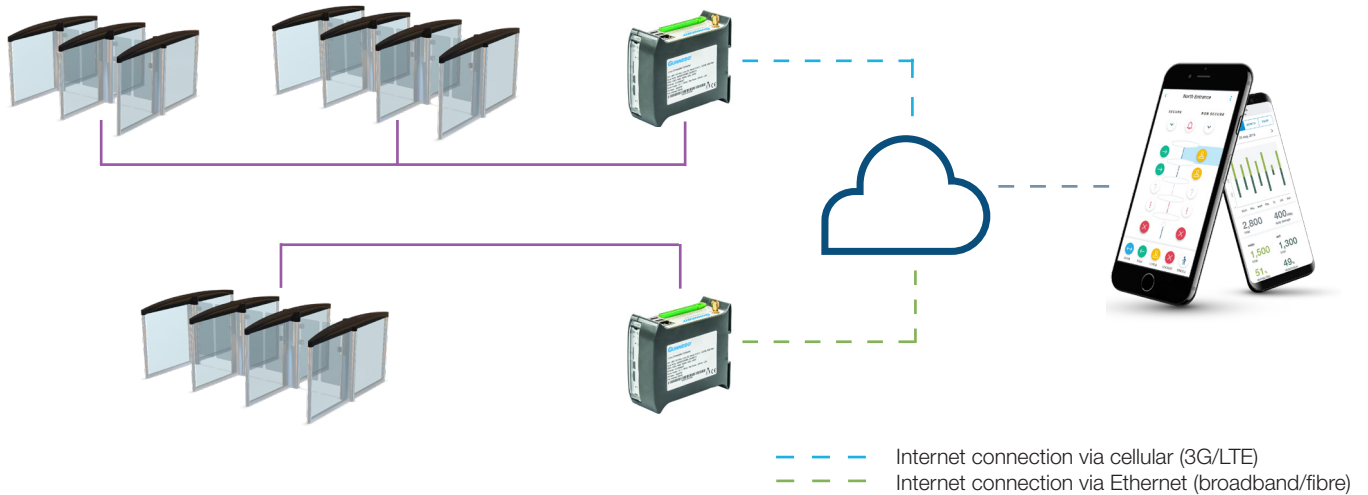

Provides unlimited administrative features required to maximise the value of other modules.

- Invite an unlimited number of users to the system (EntraLinq Starter limited to 5 users).
- Choose between 5 different user roles (access levels) for each user (EntraLinq Starter limited to 3 user roles).
- Users can be given different user roles for different banks of gates.
- Connect an unlimited number of lanes to the system (EntraLinq Starter limited to 9 lanes).

Technical specifications

Logistical and technical details

Gunnebo Bridge

The Gunnebo Bridge is the gateway which securely routes communication between a group of Gunnebo products and the cloud.

Up to 20 lanes can be connected to a single Bridge. The Gunnebo Bridge communicates to its cloud server using a lightweight and robust protocol designed especially for remote IoT communication.

Where can I find the EntraLinq app?

The EntraLinq app is available on the Apple App Store or on Google Play for Android. EntraLinq Starter bundle can be downloaded on a free of charge suscription. Bundles are on an additional charge suscription basis.

EntraLinq is suitable for iPhones, Android smartphones, iPads and tablets.
